

Solvesta

Software company — implementation and delivery partner for this project.

Muallimx Platform

Technical & Business Documentation

For engineering teams, architects, and product stakeholders

Document generated: 2026-05-12 23:59 UTC

Repository path (hint): C:\xampp\htdocs\Muallimx

This document describes the Muallimx web application: a large Laravel-based learning-management and operations platform combining public marketing pages, student learning, instructor authoring, administrative control, internal employee desks (HR / sales / recruitment), community data contributions, live classrooms, subscriptions, and multi-gateway commerce. Use it to navigate the codebase, understand role-based flows, and align product behavior with implementation. Section 12 enumerates every file in `app/Services/`; section 11 lists every middleware class; sections 25–36 are regenerated from disk and ``php artisan route:list --json`` (models, commands, jobs, listeners, every controller file, every route name, every migration, every `config/*.php`, every `lang/*.php`, providers, seeders); section 23 records community route drift — always verify with `route:list` on your branch.

0. Business domain summary

Muallimx is an integrated education platform: it sells and delivers online courses, manages instructors and internal staff, operates marketing and support channels, and monetizes through course sales, wallets, installments, and instructor subscription plans that unlock premium tooling and visibility for educators. The same codebase hosts student learning, live teaching, assessments, certificates, and operational back-office (HR, sales, recruitment) for the organization running the deployment.

1. Technology stack

Layer	Details
Runtime	PHP 8.2+
Framework	Laravel 12
Primary HTTP routes	<code>routes/web.php</code> (single large route file; API-style endpoints embedded where needed)

Solvesta

Software company — implementation and delivery partner for this project.

Auth	Session-based auth, optional Google (Socialite), TOTP 2FA (pragmarx/google2fa)
Storage	Local + AWS S3 (league/flysystem-aws-s3-v3)
Documents / exports	mPDF, PhpSpreadsheet, PhpWord (server-side PDF/Excel/Word)
Front-end	Blade templates, Tailwind-oriented utility classes in views, Font Awesome icons

2. Architectural overview

The application follows classic Laravel MVC: HTTP controllers under `app/Http/Controllers` organized by namespace (Admin, Instructor, Student, Employee, Public, Community, Auth, Api). Views live in `resources/views`. Domain logic is often extracted to `app/Services` for checkout, subscriptions, wallet finalization, classroom features, etc. Eloquent models in `app/Models` map to relational tables.

- Entry dashboard: `DashboardController@index` resolves the authenticated user's persona and redirects or renders the correct home surface.
- Authorization combines legacy role string on `users.role` with granular permissions (`permission:*` middleware) and Spatie-style role relations for employees.
- Heavy route surface: most product URLs are declared in `routes/web.php`; `grep` route names to locate controllers.

2.1 Request lifecycle (simplified)

HTTP Request → `web.php` (middleware: auth, role, permission, throttle, ...) → Controller → Service (optional) → Eloquent → Blade view / JSON / redirect

Solvesta

Software company — implementation and delivery partner for this project.

3. User personas and dashboards

After login, DashboardController inspects `is_active`, employee flags, role string, and permission-backed admin access. Invalid or missing roles force logout with a message.

Persona	Primary destination
super_admin / admin	Redirect to admin.dashboard (full admin shell with permission gates).
instructor / teacher	Instructor dashboard: courses, lessons, exams, live sessions, calendar, agreements, withdrawals, management requests, etc.
student	Student dashboard: progress, courses, assignments, certificates, wallet, subscription card, AI usages (when entitled).
Employee (<code>is_employee</code>)	If linked to RBAC roles → admin dashboard with scoped permissions; else employee.dashboard (internal HR / sales / recruitment tools).

3.1 Student experience (high level)

- Browse and purchase courses (public catalog, checkout with coupons, wallet, installments where applicable).
- My Courses: progress, lectures, video tokens, assignments, points.
- Exams, certificates, calendar, notifications, invoices, orders.
- Paid subscription features (from teacher package / subscription JSON): curriculum library, AI tools, virtual classroom, support tickets, portfolio, academy visibility, teaching opportunities, full AI suite, etc. — see `config/student_subscription_features.php`.
- Live sessions listing, live recordings, classroom meetings (host/join, whiteboard, recordings, AI session reports).
- Student AI usages index with saved games (gated by package + permission).

3.2 Instructor / teacher experience

- Course and lesson management (including advanced courses), question banks, exams, attendance.
- Live sessions: scheduling, going live, student whiteboard sync, reporting.
- Learning paths, curriculum tools, profile and branding, management requests to admin.
- Financial: instructor agreements, payout / withdrawal requests.
- Calendar integration for teaching schedule.

Solvesta

Software company — implementation and delivery partner for this project.

3.3 Admin experience

- Users, roles, permissions, student accounts, student control (paid features, consumption).
- Catalog: subjects, academic years, course categories, courses, lessons, reviews, advanced courses.
- Commerce: orders, invoices, transactions, packages, coupons, referrals, loyalty, installments, agreements.
- Operations: notifications, email broadcasts, support tickets, contact messages, site content (testimonials, services, popups, media).
- HR & workforce: employees, jobs, salaries, tasks, leave, performance, attendance, recruitment desk, hiring academies.
- Live infrastructure: live servers, live sessions admin, live recordings, classroom recordings, live settings, n8n report hooks.
- Quality control, academic supervision, instructor requests, instructor accounts, withdrawals.
- System settings, integrations (e.g. video providers, WhatsApp settings), 2FA audit logs.
- Community datasets, models, competitions; portfolio marketing review.

3.4 Employee desks

- Prefix /employee with sub-areas: sales_desk (leads, orders notes), hr_desk (directory, applications, interviews), recruitment pipelines.
- Access controlled via employee.can:* style middleware and employee job linkage on users.

Solvesta

Software company — implementation and delivery partner for this project.

4. Security, authentication, and authorization

Mechanism	Purpose
Session auth	Standard Laravel guards; guest routes for login/register/password reset.
2FA	Routes under /2fa for setup, enable, disable; challenge after login when enabled.
Throttling	Login and password reset routes use rate limiting middleware.
Permissions	Granular keys such as student.view.*, admin.access, academic_supervision.manage — enforced in routes and Blade @hasPermission.
Strict admin	rbac.strict.admin middleware tightens admin surface for non-super users.
Concurrent sessions	prevent-concurrent middleware on selected authenticated groups.

When extending the system, register new permissions in seeders (e.g. PermissionsSeeder, PermissionsAndRolesSeeder) and assign to roles; mirror checks in User model helpers where business rules depend on subscription features or legacy columns.

Solvesta

Software company — implementation and delivery partner for this project.

5. Commerce, wallets, and subscriptions

5.1 Course checkout

- Public checkout under `/course/{id}/checkout` with quote, coupon, wallet, and gateway flows.
- Gateways: Kashier callback route; Fawaterak prepare `/ methods / pay / return` URLs (return may carry subscription or order correlation query params).
- Services coordinate pricing, wallet deduction, and order finalization (search `app/Services` for Checkout, Wallet, Coupon).

5.2 Teacher subscription (SaaS plans)

- Public pricing pages and checkout for `teacher_starter` / `teacher_pro` style plans.
- Subscription requests, admin approval, online vs bank vs wallet semantics; activation services after gateway success.
- Student-facing PRO navigation is driven by active subscription rows and feature flags resolved on User.

5.3 Student subscription feature keys

`config/student_subscription_features.php` maps `feature_key` → UI route, icons, and labels. Keys include: `library_access`, `ai_tools`, `classroom_access`, `support`, `teacher_profile`, `visible_to_academies`, `can_apply_opportunities`, `full_ai_suite`, `teacher_evaluation`, `recommended_to_academies`, `priority_opportunities`, `direct_support`. Admin student-control screens consume the same config for auditing who has which feature.

Solvesta

Software company — implementation and delivery partner for this project.

6. Live sessions, recordings, and virtual classrooms

- LiveSession model supports scheduled and live states; instructors drive sessions; students consume listings and join flows.
- Recording pipeline: webhooks/API (e.g. LiveRecordingWebhookController), admin review of live-recordings and classroom-recordings.
- Classroom: join codes under /classroom/join/{code}, heartbeat and leave endpoints, share-annotation channel, student-hosted meetings under student.classroom.* with recording upload (presigned/direct), audio tracks, AI-generated meeting reports (n8n-assisted updates for reports).
- Integration endpoints under /api/... for automation (n8n live session reports, classroom meeting reports).

Solvesta

Software company — implementation and delivery partner for this project.

7. Community, portfolio, and growth

- Community contributors: datasets, models (Model Zoo style pages), competitions — separate Community controllers and views.
- Public portfolio directory and per-teacher portfolio marketing pages.
- Teacher portfolio profile workflow: pending / approved / rejected with admin marketing review routes referenced from subscription feature config.
- Referral and loyalty program entities for growth tracking.

Solvesta

Software company — implementation and delivery partner for this project.

7.1 Integrations and external systems

Integration	Role
Fawaterak	Card/online payments for course checkout and subscription checkout; return URL handling with correlation parameters.
Kashier	Alternate payment gateway with callback route.
AWS S3	Object storage for uploads, recordings, and scalable assets.
n8n / automation	HTTP endpoints for updating live session and classroom meeting reports from workflows.
Google OAuth	Social login path via Laravel Socialite.
WhatsApp	WhatsAppHelper and admin WhatsApp settings for messaging integrations.
Video providers	Admin-configurable providers for hosted lecture video delivery.

Solvesta

Software company — implementation and delivery partner for this project.

8. Data model (representative entities)

The schema is broad. The following table lists core aggregates; refer to database/migrations and app/Models for the authoritative list.

Entity group	Role in the platform
User	Central identity; role; employee fields; 2FA; referral; portfolio columns.
Course / AdvancedCourse / Lesson / Lecture	Content hierarchy, video providers, progress, materials.
Order / Payment / Invoice / Transaction / Wallet / WalletTransaction	Monetary state machines and audit.
Subscription / SubscriptionRequest / Package	Recurring access and feature entitlements.
Exam / ExamAttempt / QuestionBank	Assessment domain.
Assignment / AssignmentSubmission	Async coursework.
Certificate	Completion credentials with public verification routes.
ClassroomMeeting / ClassroomMeetingParticipant / LiveSession / LiveRecording	Synchronous teaching.
SupportTicket / SupportTicketReply	Helpdesk for students/teachers.
EmployeeJob / EmployeeTask / LeaveRequest / Hr*	Internal workforce domain.

Solvesta

Software company — implementation and delivery partner for this project.

9. Developer onboarding

1. Clone the repository and copy .env from .env.example; set APP_URL, database, mail, S3, and gateway keys.
2. composer install && php artisan key:generate
3. php artisan migrate --seed (use project-specific seeder guidance for roles/permissions).
4. npm install && npm run build (if front-end assets are versioned via Vite/mix per project).
5. Run php artisan serve or configure Apache/XAMPP virtual host to the public/ directory.
6. Use route:list and IDE search on route('...') names to jump from UI to controllers.

9.1 Where to change common behaviors

Task	Typical locations
New public page	routes/web.php + Public*Controller + resources/views/public/...
New admin module	routes/web.php admin group + Admin*Controller + resources/views/admin/... + permissions
Student navigation	resources/views/layouts/student-sidebar.blade.php + middleware on routes
Subscription gating	User subscription helpers + config/student_subscription_features.php + Subscription model JSON features
Payment return URLs	CheckoutController / SubscriptionCheckoutController + gateway dashboard

9.2 Conventions

- Prefer services for multi-step transactions (payments, activations) to keep controllers thin.
- Mirror permission names between seeders, middleware, and Blade directives.
- Bilingual UI: many strings use Laravel __() translations; documentation for product copy may live in lang/.

Solvesta

Software company — implementation and delivery partner for this project.

10. Repository layout (read this first)

Almost all HTTP routes live in routes/web.php (there is no separate routes/api.php in this project). Controllers are namespaced under app/Http/Controllers. Blade views under resources/views; translations under lang/. Database under database/migrations and database/seeder.

Location	Purpose
app/Http/Controllers/Admin	Back-office: users, finance, courses, HR, live ops, marketing.
app/Http/Controllers/Instructor	Teacher dashboard: curriculum, lectures, exams, live, payouts.
app/Http/Controllers/Student	Learner: orders, wallet, classroom, portfolio, AI usages.
app/Http/Controllers/Employee	Internal desks: sales, HR, recruitment, tasks, accounting.
app/Http/Controllers/Public	Marketing site, catalog, checkout, certificate verify.
app/Http/Controllers/Community	Contributor registration and community UI.
app/Http/Controllers/Auth	Login, register, password reset, 2FA challenge.
app/Http/Controllers/Api	Webhooks and n8n callbacks (not a full REST API surface).
app/Services	Payments, checkout pricing, Fawaterak/Kashier, subscriptions, AI client, uploads.
app/Http/Middleware	RBAC, ownership, video protection, locale, concurrent sessions.
resources/views/layouts	student-sidebar.blade.php, app layout, admin shell.
config/	student_subscription_features, rbac_*, fawaterak, kashier, security, filesystems.

Solvesta

Software company — implementation and delivery partner for this project.

11. Middleware catalog (app/Http/Middleware)

Register aliases in bootstrap/app.php or app/Http/Kernel equivalent (Laravel 11+ style). These gates wrap controllers; when debugging 403/redirect, check the route's middleware stack.

Middleware class (19 files in app/Http/Middleware)	Role
CheckActiveStatus	Blocks inactive users from proceeding after login.
CheckRole	role:student instructor teacher style role checks.
EnsurePermission	permission:admin.access and granular keys; super_admin bypass patterns.
EnsureOwnership	ownership:order,order — user must own the model instance.
EnsureGuestOnly	guest-only for registration flows that must not run for logged-in users.
EnsureTwoFactorEnabled	Forces 2FA where platform policy requires it (available; may be commented in bootstrap).
EnsureStudentAiUsagesAccess	student.ai-usages — package + permission for AI usage UI.
EnsureEmployeeCan	employee.can:sales_desk — job JSON permissions on EmployeeJob.
EnsureCommunityContributor	Restricts contributor-only routes (alias community.contributor).
PreventConcurrentSessions	prevent-concurrent — blocks parallel sessions for same account.
RestrictRbacEmployeeAdminRoutes	rbac.strict.admin — limits admin UI for RBAC employees.
VideoProtectionMiddleware	Guards lesson/exam video delivery endpoints.
SetLocale	Appends to web group: language from session/query.
SetLandingLocale	Alias landing.locale for localized landing.
SecurityHeadersMiddleware	Prepends globally: security-related HTTP headers.
InputSanitizationMiddleware	Web group: sanitizes dangerous input patterns.
FileUploadSecurityMiddleware	Web group: upload validation.
LogActivityMiddleware	Appends globally: activity / audit logging.
EnhancedRateLimitingMiddleware	Named rate limit profiles where referenced.

Solvesta

Software company — implementation and delivery partner for this project.

11.1 Bootstrap middleware & CSRF (bootstrap/app.php)

- Global: SecurityHeadersMiddleware; LogActivityMiddleware on all requests.
- Web group appended: SetLocale, InputSanitizationMiddleware, FileUploadSecurityMiddleware, CheckActiveStatus.
- CSRF validation excludes: api/n8n/* and api/live-recordings/register (external webhooks).
- Middleware aliases: role, permission, ownership, guest-only, prevent-concurrent, landing.locale, community.contributor, employee.can, rbac.strict.admin, student.ai-usages.
- AuthenticationException sends guests under /community/* to route('community.login') — verify route:list; see section 23.

Solvesta

Software company — implementation and delivery partner for this project.

12. Domain services — complete list (app/Services)

Every PHP class under app/Services/ (root and Community/) is listed below — one row per file. This is the full service layer inventory for the platform as shipped in the repository.

Service file	Responsibility (summary)
AdminPanelBranding.php	Admin UI branding / theme-related settings.
AssignmentFileStorage.php	Secure storage paths for assignment submission files.
CalendarNotificationService.php	Calendar-driven reminders / notifications.
ClassroomSubscriptionFeatureMenuService.php	Maps subscription features to classroom menu entries.
ContactMessageAlertService.php	Alerts staff when contact form messages arrive.
CouponCommissionService.php	Coupon commission accruals, expenses, payouts logic.
CourseCheckoutPricingService.php	Checkout quote: price, coupon, wallet, installments.
CurriculumLibraryR2MultipartService.php	Multipart / presigned uploads for curriculum library on object storage.
EmailNotificationService.php	Sends email broadcast campaigns.
ExcelExportService.php	Spreadsheet exports for admin reports.
FawaterakApiService.php	Low-level Fawaterak HTTP API client.
FawaterakService.php	High-level Fawaterak payment session and return handling.
FullAiSuiteContextService.php	Builds context payloads for full AI suite features.
InstructorCoursePercentageService.php	Instructor revenue share percentages per course/rules.
InstructorMarketingRankingService.php	Ranking / scoring for instructor marketing surfaces.
KashierService.php	Kashier redirect, callback, and payment status handling.
MuallimxAIClient.php	HTTP client to Muallimx AI backend (config/muallimx_ai.php).
OrderWalletAndCouponFinalizer.php	Post-payment order finalization with wallet and coupons.
PaymentGatewaySettings.php	Reads gateway credentials / modes from settings storage.
PlatformCourseCertificateService.php	Generates course completion certificates (PDF pipeline).
PlatformSecuritySettings.php	Platform-wide security toggles and secrets resolution.
PortfolioImageStorage.php	Portfolio project image storage on

Solvesta

Software company — implementation and delivery partner for this project.

	disk/S3.
PublicFooterSettings.php	Footer links / CMS blocks for public layout.
ReferralService.php	Referral codes, attribution, rewards.
SecurityService.php	Security helpers (password policy, lockouts, etc. — inspect class).
ServerSshService.php	SSH connectivity for admin live-server file browser.
SiteServiceImageStorage.php	Images for SiteService CMS pages.
SiteTestimonialImageStorage.php	Testimonial avatars / media.
StatisticsCacheService.php	Caches expensive admin statistics queries.
SubscriptionLimitService.php	Enforces plan limits (courses, storage, features).
SupportTicketAlertService.php	Notifies staff on new or escalated support tickets.
TeacherSubscriptionActivationService.php	Activates teacher subscriptions after gateway or admin action.
TeamsAttendanceImportService.php	Parses Teams attendance exports into lecture attendance.
UserProfileImageStorage.php	User profile avatar storage.
WhatsAppService.php	WhatsApp Cloud / API sends for transactional messaging.
Community/CommunityRegistrationService.php	Registers and onboards community contributors.
Community/DatasetFileReaderService.php	Reads/parses uploaded dataset files for community features.

12.1 Composer autoload helpers (app/Helpers)

Non-class helpers loaded via composer.json "files": FilesystemHelper.php, WhatsAppHelper.php — use for path normalization and WhatsApp formatting without injecting a service container.

12.2 Scheduled tasks (bootstrap/app.php)

- reports:send-monthly — monthly on day 1 at 09:00.
- Monthly cleanup: deletes old WhatsAppMessage and ActivityLog rows.
- Daily cache of active_users_today from ActivityLog.
- installments:process — daily 08:00.
- subscriptions:expire — daily 00:05.
- live:send-reminders --minutes=10 — every minute (live session reminders).
- live:auto-end-sessions — every five minutes.

Solvesta

Software company — implementation and delivery partner for this project.

13. Public (guest) surface — marketing & commerce entry

- GET / — LandingController (localized via SetLandingLocale where applied).
- Static pages: /about, /faq, /terms, /privacy, /pricing, /team, /certificates, /help, /refund, /testimonials, /events, /partners.
- Portfolio marketing: /portfolio, /portfolio/teacher/{id}, /portfolio/{id}.
- Services CMS: /services, /services/{slug}.
- Media blog: /media, /media/{id}.
- Catalog: /courses (filtering), /instructors, /instructors/{id}, /course/{id} (course landing).
- Checkout: /course/{courseId}/checkout (+ quote, complete, Kashier, Fawaterak prepare/methods/pay), /checkout/kashier/callback, /checkout/fawaterak/{status}.
- Teacher SaaS pricing: /pricing, /pricing/checkout/{plan}, Fawaterak endpoints under same area.
- Certificate verification: /certificates/verify and /certificates/verify/{code}.
- Classroom guest join: /classroom/join/{code} (+ enter, heartbeat, leave, share-annotation).
- Contact: GET/POST /contact.
- SEO: GET /sitemap.xml builds URL set from AdvancedCourse, instructors, Media, SiteService.
- Assets: GET /storage/{path} serves storage/app/public with path traversal protection; GET /mx-vendor/excalidraw/{path} serves whiteboard JS/CSS with correct MIME when public/vendor is not web-root.
- Guest auth: /login, /register, /forgot-password, /reset-password/*, /2fa/challenge — throttled.
- Legacy compatibility: GET /package/{slug} (active Package with related courses); learning-path URLs redirect to /courses or stubs; GET /learning-paths → 301 /courses.
- Fawaterak embed: 301 /fawaterk/plugin.min.js → /js/checkout-pay-widget.v1.js (FawaterkPluginController, throttled, some web middleware disabled for ad-blocker compatibility).

Solvesta

Software company — implementation and delivery partner for this project.

14. Authenticated shell — middleware group [auth, prevent-concurrent]

Everything in this group requires a logged-in user and uses concurrent-session protection.

DashboardController@GET /dashboard is the persona router.

14.1 Student-facing paths at URL root (not under /student)

- Browse catalog while logged in: /academic-years, /academic-years/{year}/subjects, /subjects/{subject}/courses, /courses/{advancedCourse}.
- role:student — /my-courses*, /orders*, /exams/* (student.exams.*), /profile, /settings, /notifications*, /calendar + /api/calendar/events.
- Consultations: /consultations* (request paid sessions with instructors).
- Portfolio: /my-portfolio/* (projects + marketing profile CRUD).
- Subscription: GET /my-subscription (student.my-subscription).
- AI usages: /ai-usages* behind student.ai-usages middleware (package + permission).
- Muallimx Classroom (student as host): /classroom* CRUD, room, recordings presign/upload/complete, audio tracks, AI report per meeting.
- Referrals: /referrals* for students.
- POST /api/validate-coupon, POST /api/video/info, GET /api/lessons/{lesson} (JSON for enrolled student).
- GET /api/courses/{course}/students — JSON list for instructor|teacher only (instructor grading tools).
- POST /courses/{advancedCourse}/order — create order from student.

14.2 Shared student|instructor|teacher routes

- /support* — SupportTicketController (tickets and replies).
- /features/{feature} — SubscriptionFeatureController; route constraint whitelist: library_access, ai_tools, classroom_access, support, visible_to_academies, can_apply_opportunities, full_ai_suite, teacher_evaluation, recommended_to_academies, priority_opportunities, direct_support.
- POST /features/full-ai-suite/preview — throttled AI preview.
- /curriculum-library* — index, item by slug, material download/view (html/pdf/presentation), file download/view.
- /academies/visibility + POST apply to academy opportunities.
- /teaching-opportunities* — listing and apply.

14.3 Prefix /student (role:student) — invoices, wallet, certificates, assignments, tasks, live

- Resource-style: student.invoices.*, student.wallet.*, student.certificates.* (+ file), student.achievements.*.

Solvesta

Software company — implementation and delivery partner for this project.

- `student.assignments.*` with ownership middleware; presigned direct-to-storage submission uploads (throttled).
- `student.tasks.*` — assigned operational tasks visible to the student.
- `student.live-sessions.*` — join/leave/status/share-annotation for scheduled live sessions.
- `student.live-recordings.index/show` — published recordings only (comment in routes references R2).

Solvesta

Software company — implementation and delivery partner for this project.

15. Prefix **/employee** — internal operations (EnsureEmployeeCan)

Each sub-route checks `employee.can:{capability}` where capability is stored on the employee's job record (JSON permissions). Typical capabilities used in routes:

employee.can key	Surface
dashboard	GET /employee/dashboard
desk_accountant	GET /employee/desk/accountant
sales_desk	/employee/sales/* — desk, orders, notes, claim, leads CRUD, convert, lost
hr_desk	/employee/hr/* — leaves approve/reject, employee directory, HR events, recruitment (openings, candidates, applications, interviews)
supervision_desk	GET /employee/desk/supervision
academic_supervision_desk	/employee/desk/academic-supervision/* — observe classroom meetings
tasks	/employee/tasks* — status updates and deliverables
leaves	/employee/leaves* — employee self-service leave requests
accounting	/employee/accounting — bank account maintenance
agreements	/employee/agreements* — view employment agreements
profile	/employee/profile
notifications	/employee/notifications* + polling endpoints
calendar	/employee/calendar + events API
reports	/employee/reports
settings	/employee/settings

Solvesta

Software company — implementation and delivery partner for this project.

16. Prefix /admin — back-office (permission:admin.access + rbac.strict.admin)

Large surface area; below is a grouped map. Many routes use throttle:* for destructive or expensive operations. Sub-routes may require extra permissions (e.g. users.permissions, academic_supervision.manage).

Admin area	What lives there (high level)
Core	dashboard, profile, nav-notifications poll, users CRUD, students-accounts, activity-log, two-factor-logs, statistics
Student control	students-control/paid-features, consumption per user
Portfolio marketing review	portfolio-marketing-profiles approve/reject
Catalog	course-categories, advanced-courses (+ students, orders, stats, duplicate, activate-student), courses/{course}/lessons, legacy subjects/courses resources
Assessments	question-bank, question-categories, exams (+ questions, publish, statistics, preview)
Lectures & assignments	lectures, assignments (+ submissions, grade), tasks admin
Portfolio QC	admin portfolio index/show approve/reject/publish/toggle-visibility
CMS / site	about, contact-messages, faq, site-services, site-testimonials
System	system-settings (+ platform 2FA enable/disable flow), packages/pricing, video-providers
Notifications	notifications*, employee-notifications*, email-broadcasts/{audience}
Enrollments	online-enrollments* (quick-activate, progress, search-by-phone)
HR / workforce	employees*, employee-jobs*, employee-tasks*, leaves*, academic-supervision*
Instructor ops	instructor-requests*, quality-control*, personal-branding*, withdrawals*, instructor-accounts
Finance	invoices*, payments*, transactions*, wallets* (duplicate resource blocks with throttles), expenses*, accounting/reports*, salaries/instructor payouts
Subscriptions	subscriptions*, subscription-requests approve/reject, teacher-features, consumption

Solvesta

Software company — implementation and delivery partner for this project.

Support & consultations	support-tickets*, support-inquiry-categories, consultations admin
Hiring	hiring-academies*, academy-opportunities* + applications + recruitment desk presentations
Curriculum library admin	curriculum-library categories/items/structure/materials with S3 multipart/presign endpoints
Marketing	popup-ads, coupons, coupon-commissions, referral-programs, referrals, loyalty, student-wallet-credit
Certificates & engagement	certificates* (+ design, preview, file), achievements*, badges*, reviews*
Attendance & performance	attendance*, performance (cache/temp/db tools)
Live stack	live-sessions*, live-servers* (SSH browse), live-recordings*, classroom-recordings*, live-settings*
Automation	n8n live-session-reports + settings/test-connection
Installments & contracts	installments/plans+agreements, agreements (instructor), employee-agreements
Sales (admin view)	sales/leads, sales analytics
Messages / WhatsApp	messages/* including WhatsApp API settings, templates, monthly reports

Note: Several legacy admin paths for academic-years, learning-paths, academic-subjects, and learning-path-enrollments are explicitly redirected to advanced-courses or online-enrollments to avoid broken bookmarks while the product consolidated on AdvancedCourse + online enrollments.

Solvesta

Software company — implementation and delivery partner for this project.

17. Prefix /instructor — teacher dashboard (role:instructor|teacher)

- Calendar + API events; consultations index/show.
- Reuses Student\ClassroomController under /instructor/classroom/* for meeting host flows (room, recordings, AI report).
- Profile + personal-branding submit for admin review.
- courses.index/show; courses/{course}/curriculum — sections, curriculum items, exams/assignments from curriculum, lecture video questions.
- Legacy /instructor/courses/{course}/lessons/* redirects to curriculum or lectures index (lessons system retired).
- lectures resource + Teams attendance sync + manual attendance update; learning-path routes redirect to dashboard.
- assignments + submissions + grade; exams + exam questions from bank or new; question-banks + questions.
- attendance index + per lecture; tasks + deliverables + progress.
- management-requests CRUD-lite for escalations to admin.
- agreements index/show + export activations; transfer-account; withdrawals create/list/show/cancel.
- live-sessions: create, start, room, student-whiteboard, share-annotations, audio presign/complete, ai-report, end.

Solvesta

Software company — implementation and delivery partner for this project.

18. Payments, orders, and gateways (technical flow)

Course purchase:

```
GET /course/{id}/checkout
POST /course/{id}/checkout/quote          - CourseCheckoutPricingService
POST /course/{id}/checkout/complete
POST /course/{id}/checkout/kashier        - Kashier redirect
POST /course/{id}/checkout/fawaterak/*    - prepare, methods, pay
GET /checkout/kashier/callback
GET /checkout/fawaterak/{status}         - return; may correlate subscription/order
POST /course/{id}/enroll-free
```

Teacher subscription (public):

```
/pricing/checkout/{plan} + store + fawaterak/*
```

Webhooks / misc API in web.php (no CSRF per bootstrap exception where noted):

```
POST /api/live-recordings/register
PATCH|POST /api/n8n/live-session-reports/{report}
PATCH|POST /api/n8n/classroom-meeting-reports/{report}
```

Wallet balances live on Wallet / WalletTransaction models; admin can credit marketing wallets. Coupons validated via /api/validate-coupon during checkout UI.

Solvesta

Software company — implementation and delivery partner for this project.

19. Subscription entitlements & config keys

Teacher-side subscription rows carry JSON feature flags. Student UI merges `activeSubscription()`, `hasSubscriptionFeature($key)`, and sometimes explicit permissions (e.g. AI usages). `config/student_subscription_features.php` binds `feature_key` → named route + icons for sidebar.

feature_key	Typical UX
library_access	Curriculum library routes.
ai_tools	<code>student.features.show feature=ai_tools</code> .
classroom_access	Muallimx Classroom host routes.
support	Support tickets.
teacher_profile	Portfolio + admin portfolio-marketing-profiles review.
visible_to_academies	Academy visibility page.
can_apply_opportunities	Teaching opportunities apply.
full_ai_suite	Full AI suite pages + throttled preview endpoint.
teacher_evaluation	Feature page placeholder / content.
recommended_to_academies	Feature page.
priority_opportunities	Feature page.
direct_support	Routes to support (priority channel branding).

Admin: `StudentControlController` uses the same keys for paid-features and per-user consumption reports.

Solvesta

Software company — implementation and delivery partner for this project.

20. Configuration files every engineer should open

File	Why open it
config/student_subscription_features.php	Maps subscription keys to student routes and admin review routes.
config/rbac_admin_route_access.php	Which admin paths each RBAC role may hit.
config/rbac_permission_sidebar.php	Sidebar visibility by permission.
config/admin_sidebar_role_map.php	Legacy/admin menu mapping.
config/employee_sidebar.php	Employee navigation structure.
config/fawaterak.php / kashier.php	Gateway keys and modes.
config/filesystems.php	Disks: local, public, s3, possibly R2-compatible.
config/security.php / upload_limits.php	Hardening and upload caps.
config/muallimx_ai.php	AI endpoint keys and defaults.
config/certificates.php	Certificate layout and issuance rules.
config/permission_aliases.php	Compatibility aliases for renamed permissions.

Solvesta

Software company — implementation and delivery partner for this project.

21. Data model — additional clusters (ORM)

Cluster	Notes
CurriculumLibrary*	Categories, items, sections, materials, files — interactive curriculum product.
AcademyOpportunity*	Hiring academies post jobs; students apply; admin recruitment desk.
Consultation* / ConsultationSetting	Paid 1:1 instructor consultations, payment confirmation workflow.
SalesLead / SalesOrderNote	CRM-style pipeline for sales employees and admin.
LiveServer / LiveSetting / LiveSessionReport	Operational live streaming infrastructure.
IntegrationSetting / VideoProvider	Third-party video and integration credentials.
PopupAd / SiteService / FAQ / Media	Marketing content models.
EmployeeAgreement / Installment*	Contracts and staged payments for staff and students.

Solvesta

Software company — implementation and delivery partner for this project.

22. Tasks route at root

`Route::resource('tasks', TaskController::class)` is registered for all authenticated users inside the auth group — separate from admin employee tasks and instructor/student task controllers. Verify which Task model/policies apply when extending.

Solvesta

Software company — implementation and delivery partner for this project.

23. Community module (code vs routes)

The repository still contains Community controllers (e.g. Community/AuthController, ContributorController, CommunityPageController), views under resources/views/community and resources/views/public/community, Admin CommunityController, middleware alias community.contributor, and bootstrap exception handling that redirects unauthenticated users on /community/* to route('community.login').

Important: as of the current routes/web.php in this codebase, php artisan route:list --path=community returns no routes — the /community route group is not registered in web.php. Blade files that call route('community.login') may break until routes are re-wired or views updated. Engineers must run route:list after pull and either restore community routes or remove dead links.

Solvesta

Software company — implementation and delivery partner for this project.

24. How to stay accurate after code changes

- Run: `php artisan route:list --columns=Method,URI,Name,Middleware > routes-export.txt` and diff after refactors.
- Regenerate this Word file whenever major route or permission changes ship.
- Use IDE 'Find usages' on `route()` names in Blade to trace UI → controller.
- Migrations are authoritative for columns; models `casts()` for JSON/array fields.

Solvesta

Software company — implementation and delivery partner for this project.

25. Auto-generated: Eloquent models (app/Models)

Complete list of PHP model files (141). Table names and relations are defined in these classes and database/migrations.

37. Appendix (quick reference)

Quick reference for navigating routes/web.php and controller namespaces.

37.1 Route prefix map

```
/ (home, marketing)
/course/* (catalog + checkout)
/dashboard (persona router)
/admin/* (operations)
/instructor/* (authoring)
/student/* (some student routes; others at root with middleware)
/employee/* (internal desks)
/classroom/join/* (guest-friendly join)
/api/* (webhooks / n8n / recordings)
```

37.2 Controller namespace index (app/Http/Controllers)

High-level map for repository navigation (non-exhaustive; reflects typical Laravel grouping):

Admin/	– platform governance, catalog, finance, HR, live ops, community moderation
Instructor/	– teacher dashboards: courses, lessons, exams, live, calendar, payouts
Student/	– enrolled learner tools: courses, wallet, subscription, classroom, AI usages
Employee/	– internal desks (sales, HR, recruitment, agreements, leave)
Public/	– marketing site, catalog, checkout, certificates verify, portfolio
Community/	– contributor flows and community pages
Auth/	– login, password, two-factor challenge

Solvesta

Software company — implementation and delivery partner for this project.
Api/ — machine-facing webhooks and n8n callbacks

37.3 Disclaimer

This document is generated to onboard engineers to the Muallimx monolith: it summarizes routes, middleware, services, and domains as reflected in the repository at generation time. It is not a substitute for php artisan route:list, migrations, or automated tests. Regenerate after major refactors and attach route:list exports for audit trails.
